STUDENT MANAGEMENT SYSTEM (SMS)

Group F Project Presentation

AUAF

OUR TEAM

Sarah Zaheer (PO)

Tamana Omar (SM)

Hamida Sana (Dev 1)

Najma Jamshidi (Dev 2)

PROJECT OVERVIEW & OBJECTIVES

- Automate school administration tasks
- Three main users: Admin, Teacher, and Student
- Built using clean Python Flask and SQLite database

TEAM STRUCTURE & ROLES

- Sarah Zaheer: Product Owner (Backlog and Requirements)
- Tamana Omar: Scrum Master (Meetings and Blockers)
- Hamida Sana: Developer 1 (Backend and Database logic)
- Najma Jamshidi: Developer 2 (Frontend layouts and UI templates)

SCRUM FRAMEWORK & TIMELINE

- Sprint 1: Login system, database setup, student listings
- Sprint 2: Course management, seat caps, attendance tracking
- Daily Stand-ups: 15-minute sync check on Google Meet

REQUIREMENTS ENGINEERING (20 USER STORIES)

01

- Authentication (US-01 to US-04)
- Student Profiles (US-05 to US-08)

02

- Course Catalog & Registration (US-09 to US-13)
- Grades & Evaluation (US-14 to US-20)

SYSTEM MODELING & ARCHITECTURE

01

- System actor roles: Admin, Teacher, Student
- UML diagrams mapped to database routes

02 Flask API handles data transmission safely

SYSTEM DEMONSTRATION (THE CODE)

- app.py: Handles Flask API endpoints
- database.py: Controls database interactions
- sms.db: Persistent SQLite file storage

PROJECT OUTCOMES & RETROSPECTIVE

- 100% of target backlog items completed
- All artifacts committed cleanly to GitHub
- Lesson learned: Regular communication keeps integration simple

THANK YOU
